

# Primary Production Analysis

Specific Production Analysis workflow with basic [Production Performance Metrics](#).

Application	Sample Cases
First guess on redevelopment opportunities	<a href="#">Natural Depletion Reservoir</a>
Identify and prioritise surveillance opportunities	<a href="#">Waterflood Sector Analysis</a>
Assess current production performance:	<a href="#">Oil Producer Analysis</a>
<ul style="list-style-type: none"><li>• current status and trends of reservoir depletion against expectations</li></ul>	<a href="#">Water Injector Analysis</a>
<ul style="list-style-type: none"><li>• current status and trends of waterflood efficiency against expectations</li></ul>	
<ul style="list-style-type: none"><li>• comparative analysis of performance of different wells or well groups</li></ul>	
<ul style="list-style-type: none"><li>• first guess on areal distribution of recovery against expectations</li></ul>	

Advantages	Limitations
Fast Track	Short production forecasts only
Minimal input data	Sometimes incapable to forecast
Straightforward analysis	High level hint of reserves distribution only
Fair hints for underperforming wells and sectors
