

Dead oil (chemical substance)

[@wikipedia](#)

Oil with no [dissolved gas](#):

$$R_s = 0$$

The usual composition is [octane \(C₈\)](#) and higher [alkanes](#) with [API gravity](#) < 40.

May include minor [organic](#) and [inorganic chemical substances](#).

If [oil](#) does contain [dissolved gas](#) then it is called [live oil](#).
