

Lithological facies (lithofacies)

A massive body of [rock](#) characterized by the same/similar [lithology](#)

[Lithofacies](#) constitute [depositional facies](#)

[Lithofacies](#) are identified based on the:

- [core data analysis](#)
- [seismic survey](#)
- [RDL data clusterisation](#) (see [Lithofacies Log Interpretation](#))

The classification of [lithofacies](#) follows that of [rocks](#) / [lithology](#):

Sedimentary		Igneous	Metamorphic
Clastic Rock	Carbonate Rock
