

Reflection Seismology

@wikipedia

Synonym: [Reflection Seismology](#) = [Seismic Survey](#)

One of the key methods of [Subsurface Exploration](#) that uses the [body wave](#) propagations in [Earth's](#) interior to estimate subsurface [Earth's](#) structure.

It's based on exciting the [body waves](#) at [Earth's](#) surface (also called [seismic waves](#)) and then. capturing the numerous reflections of [body waves](#) at a different point on surface (see **Fig. 1**).
