

Reservoir Data Logs (RDL) @model

Mathematical model for Reservoir Data Logs in terms of:

Logging category
Petrotypes / Lithofacies
Mineral composition
Effective porosity
Absolute permeability
Fluid Saturation
Geomechanical rock properties
Thermal rock properties

All log models have a form of:

$$(1) \quad \text{OutputLog}(l) = \text{Model}_{[\alpha_1, \dots, \alpha_M]} (\text{InputLog}_1(l), \text{InputLog}_2(l), \dots, \text{InputLog}_N(l))$$

where $l(x, y, z)$ is the **along-hole depth** and (x, y, z) – 3D spatial coordinates along **well trajectory**.
