

Relative Water Mobility

A property characterising agility of the [water](#) under [pressure](#) gradient with account of [relative permeability](#) and [dynamic fluid viscosity](#):

$$(1) \quad M_{rw}(s) = \frac{k_{rw}}{\mu_w}$$

where

$k_{rw}(s)$	relative formation permeability to water
μ_w	dynamic viscosity of water
$s = \{s_\alpha\}$	reservoir saturation $\sum_\alpha s_\alpha = 1$
