

Hydraulic Pump

[@wikipedia](#)

Specific type of [Lift Mechanism](#) based on reducing the [bottom-hole pressure](#) by creating a differential pressure at bottom-hole nozzle-venturi pair with high-pressure flowstream from surface.

The major difference with SRP is that it is not a permanent installation but a mobile wireline-conveyed operation.

It is used both for permanent production and for wellbore surveys (pressure build-ups and wellbore logging).
