

# Isobaric specific heat capacity = cmp

@wikipedia

Amount of [heat](#) required to change the temperature of one unit of [mass](#) under a constant [pressure](#) by one unit of [temperature](#):

$$c_p = \left( \frac{\delta Q}{\delta m \cdot \delta T} \right)_p$$

Symbol	Dimension	SI units	Oil metric units	Oil field units
$c_p$	$L^2 T^{2/1}$	J/(kg°K)	J/(kg°C)	BTU/(lbm°F)

It is a [material property](#) and properly tabulated for the vast majority of materials.
