

Drawdown Transient Response = DTR

(also called [unit-rate self-response](#))

In [single-well deconvolution](#):

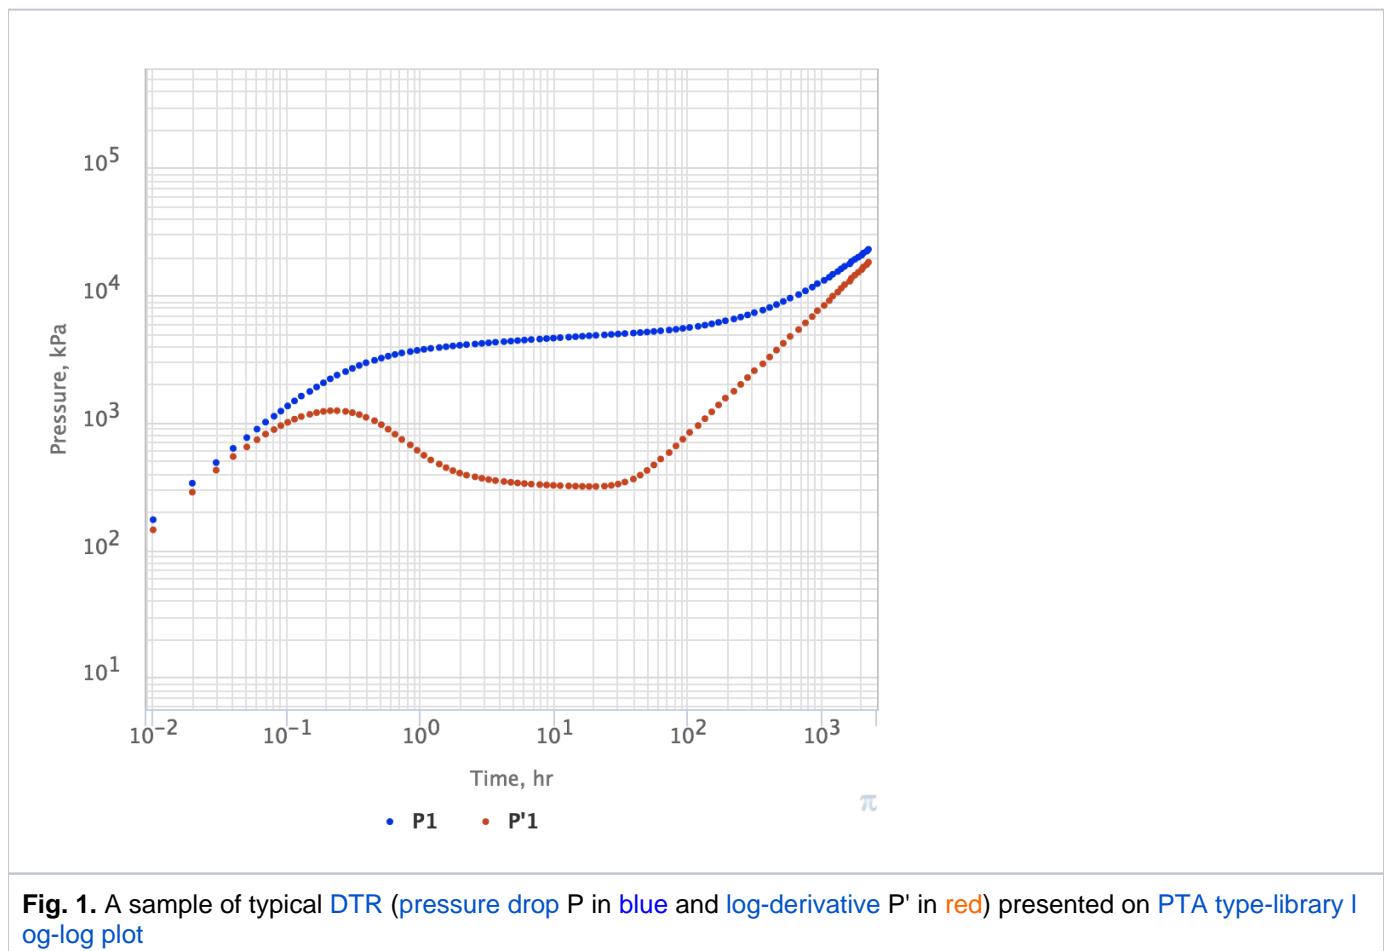

Sandface pressure response drop to the constant unit-rate production $q(t) = 1$:

$$(1) \quad p_u(t) = p_{wf}(0) - p_{wf}(t)|_{q=1} > 0, \quad p_u(0) = 0$$

In [multi-well deconvolution](#):

Sandface pressure response drop in well "m" to the constant unit-rate production $q_m = 1$ from the same well "m":

$$(2) \quad p_{u,mn}(t) = p_{wf,mn}(0) - p_{wf,mn}(t)|_{q_m=1} > 0, \quad p_{u,mn}(0) = 0$$
