

# Geothermal Temperature Field @model

@wikipedia

## Motivation

In some specific subsurface applications which require the knowledge of subsurface temperature distributions the assumption of the [Constant Areal Geothermal Temperature Profile](#) is not valid and the problem requires a proper 3D modelling solution.

## Outputs

|                      |                                                           |
