

# Single-well deconvolution = SDCV

Inverse problem to [pressure convolution](#), performed as a fully or semi-automated search for the well's initial pressure and [Drawdown Transient Response \(DTR\)](#) in order to fit the [sandface pressure](#) response (usually recalculated from [PD](#) data using [wellbore flow model](#) for depth adjustment) to total sandface flow rate variation history (usually recalculated from daily allocations based on [surface well tests](#)).
