

# Speed of Sound @model

@wikipedia

$$(1) \quad v = \sqrt{\left(\frac{\partial p}{\partial \rho}\right)_S}$$

where

$p$	pressure
$\rho$	density
$S$	entropy

and the derivative is taken at constant entropy:  $S = \text{const.}$

It differs for [p-wave](#) and [s-wave](#):

p-wave	s-wave
(2) $v_p = \sqrt{\frac{K + \frac{4}{3}G}{\rho}}$	(3) $v_s = \sqrt{\frac{G}{\rho}}$

where

$\rho$	density
$K$	Bulk modulus
$G$	Shear modulus
