

# Fluid Density

The **mass** of **fluid** per unit **volume**:

$$\rho = \frac{m}{V}$$

where

$m$	fluid mass	$V$	fluid volume
-----	------------	-----	--------------

The total **fluid density** of **multiphase fluid** is given by following equation:

$$(1) \quad \rho = \sum_{\alpha} s_{\alpha} \rho_{\alpha}$$

where

$\rho_{\alpha}$	Density of $\alpha$ -phase	$s_{\alpha}$	volumetric share of $\alpha$ -phase
-----------------	----------------------------	--------------	-------------------------------------

---

Density of popular **petroleum fluids** at **SPE Standard Conditions (STP)**:

Fluid	Typical range (g/cc)
Natural Gas	0.007 – 0.30
Gas Condensate	0.200 – 0.40
Oil	0.400 – 1.12
Water	1.000 – 1.15
