

DCA ANN @model

[@wikipedia](#)

One of mathematical models of [Decline Curve Analysis](#) based on the following equations:

(1) $q(t) = q_0 \cdot \exp\left[-\int_0^t D(Q(t)) dt\right]$	(2) $D(Q) = \text{ANN}(Q)$
--	----------------------------

where

$q_0 = q(t = 0)$	Initial production rate of a well (or groups of wells)
$D(t) = -\frac{dq}{dQ}$	Production decline rate
$Q(t) = \int_0^t q(t)dt$	cumulative production
$\text{ANN}(Q)$	artificial neural-network regression of Production decline rate D on cumulative production Q

[DCA ANN](#) is an empirical correlation for production from both finite-reserves $Q_{\max} \leq \infty$ or infinite-reserves $Q_{\max} = \infty$ r eservoirs.
