

Critical Point = (T_c, P_c)

@wikipedia

A property of a [Pure Substance](#) represented by the end point (T_c, P_c) of a [Vapour Liquid Equilibrium \(VLE\)](#) curve above which the [liquid](#) and [gas](#) state of a [Pure Substance](#) do not have a distinct boundary (see [Fig. 1](#)).

It is characterized by [critical temperature](#) T_c and [critical pressure](#) P_c , both being a [material property](#).
