

Standard Earth's Gravity Vector

@wikipedia

The most common value of the [Earth's Gravity](#) exerted on a unit mass at the [Earth's surface](#):

$$(1) \quad \mathbf{g} = g \cdot \mathbf{e}_g$$

where

g	Standard gravity constant
\mathbf{e}_g	Earth's Gravity Direction

The actual [Earth's Gravity](#) variates depending on the location at the [Earth's surface](#).
