

Bulk Density

Total density of the rock and saturating fluids:

$$\rho_b = \frac{m_t}{V_t}$$

where m_t – total mass of rock element, V_t – total volume occupied by the rock element m_t .

The bulk density ρ_B is measured in $[10^3 \cdot \frac{\text{kg}}{\text{m}^3}] = [\frac{\text{g}}{\text{cc}}]$.

$$(1) \quad \rho_B = \phi_e \rho_f + V_{sh} \rho_{sh} + V_m \rho_m = \phi_e \rho_f + V_{sh} \rho_{sh} + (1 - \phi_e - V_{sh}) \rho_m$$

$$(2) \quad \rho_f = s_{xo} \rho_{mf} + (1 - s_{xo})(s_w \rho_w + s_o \rho_o + s_g \rho_g)$$

$$(3) \quad \rho_m = \sum_i V_{mi} \rho_{mi}$$
