

Subsurface Production Operations (Petroleum Upstream)

Part of [Petroleum Industry](#) related to maintaining

- production of hydrocarbons from [subsurface](#) deposits up to the [wellheads](#)
- injection fluids (water, gas, chemicals) from [wellheads](#) down to [subsurface](#) reservoirs
- [subsurface](#) metering

The major challenge is to mitigate the numerous [Subsurface Production Complications](#), which is facilitated by three major operational areas:

Well & Reservoir Management	Reservoir Study & Modelling	Well & Reservoir Surveillance
-------------------------------------------------	-------------------------------------------------	---------------------------------------------------

and various [Subsurface Production Disciplines](#).
