

Volatile oil (fluid)

Vaporized fraction of liquid oil in natural gas.

The quantitative measure is given by Vaporized Oil Ratio:

$$R_v = \frac{V_{Og}^\circ}{V_{Gg}^\circ} = \frac{m_{Og}}{m_{Gg}} \cdot \frac{\rho_G^\circ}{\rho_O^\circ}$$

where

$V_{Og}^\circ = \frac{m_{Og}}{\rho_O^\circ}$	STP volume of dead oil component of mass m_{Og} and STP density ρ_O°
$V_{Gg}^\circ = \frac{m_{Gg}}{\rho_G^\circ}$	STP volume of natural gas component of mass m_{Gg} and STP density ρ_G°

$R_v(p, T)$ is a cross-phase exchange coefficient and a function of pressure and temperature
