

# Homogeneous reservoir

Subsurface reservoir with the primary reservoir properties staying constant across the reservoir volume:

1	$h_e(\mathbf{r}) = \text{const}$
2	$\phi_e(\mathbf{r}) = \text{const} \rightarrow c_r(\mathbf{r}) = \text{const}$
3	No fractures, no faults

In practice this concept is used as a proxy model for rough estimations of basic rock properties and for educational purposes
