

# Vertical-to-horizontal permeability ratio = $k_v/k_h = k_z/k_r$

Ratio of [vertical permeability](#) to [horizontal permeability](#) characterising vertical anisotropy:

(1) 
$$k_v/k_h = \frac{k_v}{k_h}$$

The most typical range of values is:  $0.1 \leq k_v/k_h \leq 1$
