

Tonne (oil quantity measure)

Commercial measure of oil quantity in [Russia](#).

Unlike world trades which are using the [volumetric](#) measure ([barrels](#) or [bbl](#)), [Russia](#) is using the [mass](#) measure ([tonne](#) or [t](#)).

Conversion to [oil barrels](#) for popular [crudes](#) is brought in the table below:

Crude	Brent	Siberian Light	WTI	Urals
bbl/t	7.59	$7.463 \div 7.418$	7.33	7.276

If crude is not specified then the most popular conversion factor by default is 7.276 [bbl/t](#) mostly because [Urals](#) is the most popular [crude](#) traded in [tonnes](#).
