

Dynamic Flow Model = DFM

Mathematical model simulating the process of fluid transport between [petroleum reservoir](#) and fluid tanks at surface and consisting of following components:

Reservoir Flow Model	Wellbore Flow Model	Pipe Flow Model	Water Supply System Model	Gas Supply System Model
--------------------------------------	-------------------------------------	---------------------------------	---	---

Not to be confused with [Dynamic Reservoir Model](#) often shorten as [Dynamic Model](#) or [DM](#) which is equivalent to [Reservoir Flow Model](#).
